Cybertech Enterprises, Inc.

Cybertech Enterprises uses Adobe Acrobat™ technology to transform academic journals into electronic documents.

A VirtualCopy of paper-based originals retains the format, pagination, and graphics of the original document.

VirtualCopy electronic documents offer a variety of benefits unavailable in conventional paper formats:

- Full-text searchability
- Available over networks
- Reduced acquisition costs
- Vastly reduced storage costs

Acrobat is a trademark of Adobe Systems Incorporated

One CD-ROM can store up to 30,000 pages of text and graphics – 40 to 60 years of most quarterly publications.

VirtualCopy products can assist librarians in the constant battle for resources by recovering shelf space and reducing the costs of acquisitions, archiving and document delivery.

VirtualCopy periodicals offer researchers and scholars complete documents – not just citations or abstracts – and with flexible search options that include full-text, author/title, proximity, case sensitive, Boolean, and wild card functions.

Professional organizations can establish fresh lines of revenue by transforming old issues and volumes of periodicals into valuable new CD-ROM products for an information hungry environment.

Increase the value and significance of your serials and documents. Make them more accessible and less expensive to store – invest in VirtualCopy technology today.
